

# Time & multivariate

How can we represent patterns and trends in time-series data?

What techniques reveal relationships across multiple variables simultaneously?

## Economic growth by year of entry to labor market

In an earlier chart, we combined many years of growth into a single line for each generation. But that conceals many ups and downs. To better show our estimates, we've charted cumulative GDP growth in the two decades following every graduation year's entry into the labor market.

# Interpretability & explainability

How can visualizations make complex machine models and data understandable to diverse audiences?
