Introducing AI-Generated Summaries for Followups and Folders

Dear Instructor,

We are pleased to introduce an optional AI-powered summarization feature to help your students get more out of discussions, especially in larger classes. This feature is disabled by default and per your Institution's policies, you can enable and disable this feature any time in the Manage Class tab under 'Q&A Settings'.

Followup Summarization: If enabled, any post with 5 or more followup comments will display a 'Summarize' button. Once someone clicks this button, a summary of the followup comments will appear for everyone that can view the post. An updated summary can be generated once new followup comments are made.

Folder Summarization: If enabled, everyone will see a 'Folder Summary' box appear beneath the 'Class at a Glance' box. Folders with at least 5 posts will show in a drop-down in which you can select which folder you'd like to summarize. This summary is generated for each individual user.

Enrollment & Wait list

We are trying our best, but there is a room capacity :-)

Not unlikely if you are the first few on the wait list
